

Team KOASK

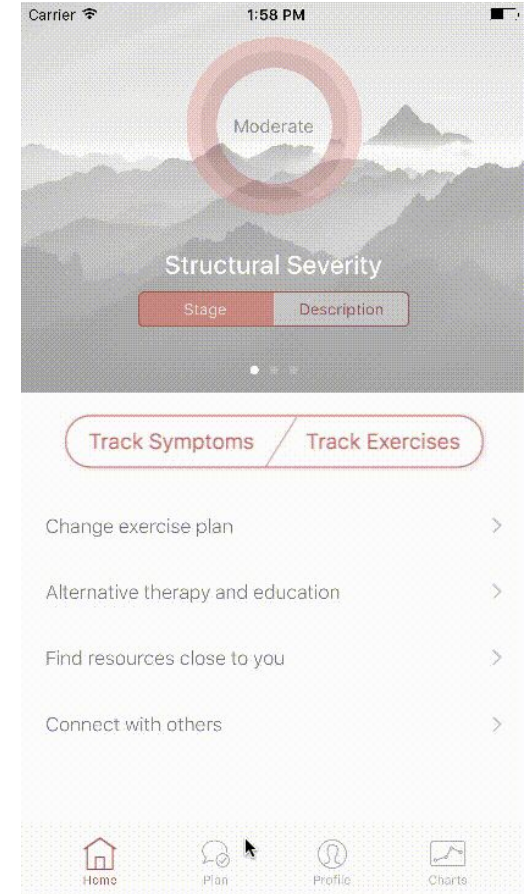

March 22nd SCRUM

Meeting With Dr. Sharif and Research Assistant

- Very happy with our work. Just a few things left to complete:
 - Implement a structural severity graph
 - Connect survey results to all graphs and circles on dashboard.
 - Implement or prototype a simple reminder system for users to re-enter symptom data.
A few options:
 - Some sort of badge indicating the number of surveys that are overdue for updating.
 - A reminder that pops up when the user opens the app.
 - A notification that appears whether or not the app is open.
 - Send him an updated screen capture demo video or make password-protected website available to him and his colleagues.
- Exercise selection, tracking, and reminder functionality is nice but not required

Graphs

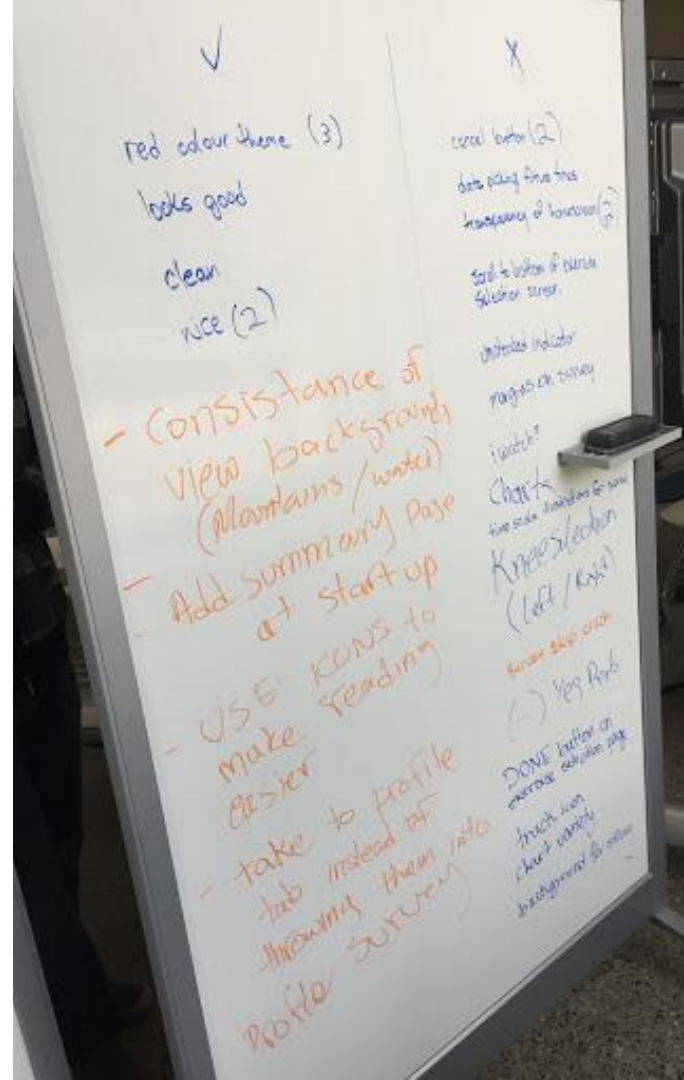

- Added animation
- Stylistic choices
 - Animation frequency
 - Reference Lines
 - Background
- Still very much a work in progress

The Testing Session

Very helpful feedback

- Keep themes more consistent
- Rearrange survey UI elements such as knee choice position and remove the cancel button
- Provide the user information of functions and uses through onboarding
- Improve feedback to user (confirmation buttons, tracking indicators)

Feedback Incorporation

- No new functionality or major changes
- Bug fixes, minor tweaks
- UI design

Going Forward

- Act upon feedback
- Finalize the Symptom Tracker landing page
- Persist the survey results
- Get the survey results into the charts
- Test and debug
- Presentation at ABJHI event on April 18
